Art Unit: 1754

Claims 1-7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. It is indefinite as to what would constitute the "product purity specification".

Claim 8 is objected to as based on a rejected parent claim, and would be allowed if written in independent form.

The following is a statement of reasons for the indication of allowable subject matter: It is well-known to store gases in caverns. (See the article by Gehle et al entitled "A Brief History of Salt Cavern Use"). It is also well-known that hydrogen should be purified by removing carbon dioxide and water. (See Paragraph [0003] of Spencer (US 2004/0123738.) However there is no teaching, disclosure or suggestion in the prior art to remove carbon dioxide and hydrogen from a crude hydrogen stream which had previously been compressed, introduced into a salt cavern and recovered from the salt cavern. Nor would there be any motivation from the prior art to do so. Applicants' specification discloses in Paragraph [0008] on page 3 that it has been found by the inventors herein that storage of hydrogen within salt formation produces unacceptably high levels of carbon dioxide and potentially other impurities in the hydrogen, and that purification of the hydrogen stream from such impurities allows it to be delivered at any desired product specification.
